

cricket player performance tracking Application:

CRICKSTATS

8. PROJECT DEMONSTRATION

8.1 Demonstration Objective

The main objective of the demonstration phase is to present the working of the CRICKSTATS – Cricket Player Performance Tracking Application and show how the application tracks and displays cricket player performance.

The demonstration explains the major features and modules of the application in a clear and systematic manner. It shows how player details and match performance data are entered, stored, processed, and displayed.

The demonstration also verifies that the application performs its intended functions correctly and provides useful player statistics to the users.

Main Objectives

- To demonstrate the complete working of the CRICKSTATS application.
- To show how player information is added and managed.
- To demonstrate the entry of match and performance details.
- To display batting and bowling statistics.
- To show how player performance records are tracked.
- To verify that the application produces accurate and understandable results.
- To demonstrate the user interface and major application features.
-

8.2 Demonstration Prerequisites

Before starting the demonstration, the following requirements should be available.

Hardware Requirements

- Computer or laptop
- Minimum required RAM for running the application
- Keyboard and mouse
- Stable power supply

Software Requirements

- Required operating system
- Web browser or application environment
- Required programming language/software
- Database system, if used
- Required development tools

Data Requirements

Sample cricket player data should be prepared before the demonstration.

Player Name	Matches	Run	Wickets
Player A	10	450	5
Player B	12	380	15
Player C	8	290	10

The sample data helps demonstrate how the application stores and displays player performance.

Other Prerequisites

- Application should be installed or properly configured.
- Database should be connected and ready.
- Required sample records should be available.
- All major modules should be tested before the demonstration.
- The system should be checked for errors before presentation.

8.3 Demonstration Steps

The demonstration of CRICKSTATS can be performed through the following steps.

Step 1: Launch the Application

- First, open the CRICKSTATS – Cricket Player Performance Tracking Application.
- The home page or main dashboard is displayed. It provides access to the different features of the application.

Step 2: Display the Home Page

- The home page provides an overview of the application and contains navigation options for accessing player and performance-related information.
- The presenter explains the purpose of CRICKSTATS and briefly introduces its major features.

Step 3: Add Player Details

- The user can enter basic player information such as:
 - Player Name
 - Player ID
 - Team
 - Playing Role
 - Age or other required details

After entering the details, the user saves the player information.

Step 4: Enter Match Details

The match information can be entered into the system.

Example details include:

- Match ID
- Match Date
- Opponent Team
- Match Format
- Player Participation

This information is stored for maintaining match-wise performance records.

Step 5: Enter Performance Details

The user's performance information is entered based on the match.

For batting, the application can record:

- Runs
- Balls Faced
- Strike Rate
- Fours
- Sixes

For bowling, the application can record:

- Overs
- Runs Conceded
- Wickets
- Economy Rate

Step 6: View Player Statistics

- After entering the data, the user can view the player's statistics.
- The application displays the available performance information in an organized format.

Step 7: Track Performance

- The application can be used to track player performance across multiple matches.
- The user can observe changes in runs, wickets, batting performance, and bowling performance based on the stored records.

Step 8: Display Results

- Finally, the application displays the processed player statistics and performance results.
- The presenter explains how the displayed information helps users understand the player's performance.

8.4 Expected Demonstration Result

After completing the demonstration, the CRICKSTATS application is expected to successfully perform its major functions.

The expected results include:

1. The application should launch successfully without errors.
2. The home page/dashboard should be displayed correctly.
3. Player details should be entered and stored successfully.
4. Match details should be recorded properly.
5. Player batting and bowling performance should be stored correctly.
6. Player statistics should be displayed in an organized format.
7. The system should correctly process the available performance data.
8. Users should be able to view player performance records easily.
9. The application should provide accurate results based on the entered data.
10. The overall application should demonstrate the main purpose of tracking cricket player performance.

Expected Output

The final output may contain a player performance dashboard such as:

Player performance:

Statistic	Result
Matches played	10
Runs scored	450
Wickets	5
Batting average	Displayed
Strike Rate	Displayed
Bowling performance	Displayed

This output allows the user to understand the player's overall performance.

8.5 Final Demonstration Checklist

Before completing the project demonstration, the following checklist should be verified.

Application Checklist

- ☐ Application launches successfully.
- ☐ Home page/dashboard works correctly.
- ☐ Navigation between modules works properly.
- ☐ Player details can be entered.
- ☐ Player details are stored correctly.
- ☐ Match details can be entered.
- ☐ Performance details can be entered.
- ☐ Batting statistics are displayed.
- ☐ Bowling statistics are displayed.
- ☐ Player performance can be viewed.
- ☐ Calculations and results are correct.

- ☐ No major errors occur during demonstration.
- ☐ Database connection works properly, if applicable.
- ☐ Screenshots of important outputs are available.

Presentation Checklist

- ☐ Project title and objective are explained.
- ☐ Major modules are introduced.
- ☐ Application workflow is explained.
- ☐ Sample data is ready.
- ☐ Expected output is demonstrated.
- ☐ Important features are explained clearly.
- ☐ Questions from the project guide/evaluator can be answered.

8.6 Demonstration Conclusion

The demonstration phase of the CRICKSTATS – Cricket Player Performance Tracking Application successfully presents the working and major functionalities of the system. The demonstration shows how player details, match information, and performance statistics are entered, stored, processed, and displayed.

The application provides an organized method for tracking cricket player performance and makes important statistics easier to access and understand. The demonstration also confirms that the major modules of the application work according to the defined requirements.

Overall, the demonstration provides a clear understanding of the CRICKSTATS application and its ability to manage and track cricket player performance data effectively.
